PROFESSIONAL SUMMARY

Junior Backend Software Engineer with a strong foundation in Python and a passion for solving complex problems, which I've sharpened through LeetCode challenges. I have hands-on experience building RESTful APIs using Django and Django REST Framework, and I'm comfortable designing relational databases and optimizing queries in PostgreSQL and MySQL. I focus on writing clean, efficient, and production-ready code with a priority on security and scalability. I enjoy building solid authentication systems and maintaining a clean architecture to ensure the backend is both reliable and easy to scale.

TECHNICAL SKILLS

Languages: Python | **English (Professional Working Proficiency)** | **Frameworks:** Django, Django REST Framework | **Databases:** PostgreSQL, MySQL | **Backend Skills:** REST API Development, Authentication (JWT), Pagination, Filtering | **Tools & Technologies:** Git, GitHub, Postman | **Concepts:** Data Structures & Algorithms, Object-Oriented Programming (OOP)

PROJECTS

1. Multi-Vendor Marketplace API (Django REST Framework)

github.com/indrojchowdhury

I built a multi-vendor marketplace API using Django REST Framework, where I implemented JWT authentication and role-based access control for various user types. Developed all the core backend features, including product management, a cart system, order handling, and payment integration. To ensure performance and data consistency, I designed a relational database structure with optimized model relationships. Throughout the project, I followed REST API principles to maintain a clean, modular, and scalable backend architecture, while testing and securing the APIs using Bearer token authentication and Postman for validation.

2. Job Portal

github.com/indrojchowdhury

Built a Django-based job portal with a strong focus on backend development, where I implemented role-based authentication for job seekers and employers using a custom user model. Designed relational database models to manage jobs, applications, and profiles, creating a complete workflow for job posting, browsing, and applications with resume uploads. For security, I implemented permission-based access control, protected views, and an application management system with status tracking. I also built responsive frontend interfaces using Django templates and Bootstrap, and ensured the project had deployment-ready settings with proper media and static file handling.

WORK EXPERIENCE

Dec 2023 - May 2024

Product Development Engineer at Desh Universal Private Limited

- Implemented & Tested web based software. Along with achieved the best outcome from clients.
 - Analyzed market trends and competitor strategies to inform feature prioritization and technical roadmaps.
-

EDUCATION

Jan 2017 - April 2022

Bachelor of Science in Computer Science & Engineering

American International University-Bangladesh

CGPA: 3.34 out of 4.0

CERTIFICATES

Full Stack Web Development with Python, Django & React (Ostad) | UI-UX Guided Program (Ostad) | SQA: Manual & Automated Testing (Ostad)
